# Create and Manage Game Portal Content

This article explains how to create and manage Game Portal content in the Publisher Dashboard. You can also create and manage content using the Game Portal's **Content API service**.

> To add content to a page, a page must be created first. For instructions, see **Create and Manage a Game Portal Page**.

## Create content

To create content:

1. In your game portal project, go to the **Content** tab and click **Create New Content**.
2. (Optional) If you plan to add content in additional languages, open the **Translations** drop-down menu and select **English** first. Complete all required fields. Then, select the additional language you want to add and fill out the fields again for that language.

   > If you don't see the **Translations** drop-down menu, you'll need to add at least one language other than English in the **Translations** section of the Publisher Dashboard first. See **Add and Manage Languages** for instructions.

3. In the **General** section:
   - Enter a **Title** and **Description**.
   - Select the **Content type** to control the preview layout. The full content page is the same for both options.

    - **Article:** Displays as a vertical card within a grid layout. The image appears above the publication date, title, excerpt, and **Read More** button.
    - **News:** Displays as a full-width horizontal card. The image appears on one side, with the publication date, title, excerpt, and **Read More** button on the other side.
- Write your content in the **Body Text**.
    - Use the built-in editing tools to insert and format text, images, links, and lists.
    - Enable **Dev Mode** to edit the content directly using Markdown.
- Upload a header image and a thumbnail image.
- Under **Pages** select the pages where you want the content to appear.

> You can't add content to the **Store** page.

- Add **Labels** separated by commas to categorize the content. These labels will appear on the thumbnail image of the selected pages.
- Define a slug for the URL path.
- Set the content **Visibility** to either:
    - **Public:** Visible to all Game Portal visitors.
    - **Segmented:** Visible only to players who are logged into the Game Portal. Content visibility is affected by both page and content settings:
        - If a page is **Public** and content is **Segmented**, only the players who are logged in can see the content.
        - If a page is **Segmented** and content is **Public**, only players who are logged in can see the content.
        - If both are **Segmented**, only players who are logged in can see the content.
- Use the **Tag** drop-down menu to add an internal tag for organizing your content. You can manage the tag as follows:
    - **Assign a tag:** Select an existing tag from the list.
    - **Create a tag:** Type a tag name in the search field, and then press **Enter**.

- **Edit a tag:** Click the ellipsis next to the tag you want to edit, and then click **Edit**.
- **Delete a tag:** Click the ellipsis next to the tag you want to delete, and then click **Delete**.

> Tags are used for internal organization only and aren't visible to players.

4. At the top of the editor, select the content visibility. By default, content is set to **Hidden**, but you can change it to **Visible**.

> Content assigned to **Hidden** pages will also be hidden.

5. If the content is set to **Hidden**, you can schedule it to be published at a later date:
   - Go to the **Schedule publication date** section.
   - Toggle **Enable scheduled publishing**.
   - Select a desired publish date.

## Edit content

To edit content:

1. In your Game Portal project go to the **Content** tab.
2. Click the ellipsis next to the content you want to update and select **Edit**.
3. Make changes as needed, and then click **Update** to save.

## Delete content

To delete content:

1. In your Game Portal project go to the **Content** tab.
2. Click the ellipsis next to the content you want to delete, and then click **Delete**.
